1954 CENSUS OF MANUFACTURES
ALPHABETICAL LIST OF MANUFACTURED PRODUCTS

This document arranges, in alphabetic order, products taken from (1) the 1954 Census Numerical List of Manufactured Products (2) Standard Industrial Classification Manual, Part II - Alphabetic Index Revised to 1953, and (3) Coding Decisions made in previous surveys, i. e. Annual Survey of Manufactures, 1947 Census of Manufactures, etc. Each of the items listed in this manual is assigned a 5-digit 1954 Census product code which generally identifies the industry and product class in which it is classified. The 5-digit code reference provides an index in locating the correct product (or industry) classification in the "Numerical List of Manufactured Products" which lists the 7-digit products for which data are collected in the Census and the columnar information requested for each. This alphabetic list should be used in conjunction with the manual, "Numerical List of Manufactured Products" in assigning product (or industry) classifications in the Census.

In order to limit the number of digits of a product description to a maximum of sixty-five it was necessary to make frequent use of abbreviations. The most common of these are:

- nec.....not elsewhere classified
- exc.....except
- mtl.....metal
- plt.....plant
- incl.....including
- equip.....equipment
- mach.....machinery
- mat.....material

This listing has been prepared to meet the needs arising out of the Economic Censuses of 1954. Changes which may become necessary as a result of the Census processing operations will be incorporated as they develop. Holders of the listing will be notified of changes. Hence the distribution of the listing will be limited.
